

# PoD

“a PROOF cluster on-the-fly”

Status report

Anar Manafov, GSI Darmstadt

# PoD v2.0.7 (previous release)

- one-click-installation,
- user friendly GUI – easy to config. and use,
- works out of the box,
- dynamic ports on UIs and WNs,
- supports reconnections,
- supports different resources (with help of a plug-in system).

# New in PoD v2.0.8

- resource requirements were reduced by a factor of 3,
- improved support of multi-core/multi-user,
- revised external dependencies of PROOFAgent,
- a new configuration file format and a new build system for PROOFAgent,
- auto-shut-down of idle workers,
- an improved version of LSF plug-in.

# Ready for the end of July 2009

- implement a single user-defaults configuration,
- extend the LSF plug-in (job kill and peek in GUI),
- documentation update,
- + many small tasks (see PoD trac:  
[subversion.gsi.de/trac/dgrid](http://subversion.gsi.de/trac/dgrid)).

# Long-term tasks

- disentangled PoD: let users have PoD UI everywhere they want with an access to a PoD server via ssh,
- a configurable number of threads per worker in PROOFAgent,
- support for Condor,
- implement an automated functional test.
